

DESCRIPTION :

Specially formulated oil for 2-stroke outboard engines

FEATURES:

Excellent protection against component wear. During periods of standstill, it provides high protection against corrosion and rust. It has a great capacity to keep the internal parts of the engine clean (piston, spark plugs...), avoiding the sticking of rings and the formation of deposits. Meets the increasingly stringent requirements on the control of pollutant emissions and smoke suppression. High fluidity at low temperatures. Applicable even in very cold climatic conditions.

APPLICATIONS:

Specially formulated lubricating oil for air-cooled 2-stroke outboard engines.

QUALITY LEVELS:

NMMA TC-W3 (NMMA- General Marine Builders Association)

TECHNICAL DATA:

Description :	Lubricating oil for outboard engines, jet skis.	
Aspect :	Visual	Viscous fluid
Viscosity at 40°C :	ASTM D-445	40 cSt minimum
Viscosity at 100°C :	ASTM D-445	6 -8 cSt
Viscosity index:	ASTM D2270	120 minimum
Flash point:	UNE 51-023	150 °C (typical)
Freezing point:	ASTM D-1177-65	- 25 °C maximum

The above-mentioned characteristics represent typical values obtained within a period
