BRAKE AND CLUTCH CLEANER

ED-04
FEB 14

DESCRIPTION:

Special cleaner for brake discs, brake pads, clutches, drums, using a mixture of solvents that removes grease, dirt and dust. It can be used for general cleaning of any mechanical component, effectively degreasing and removing deposits formed, in all cases where a quick removal of dirt and dryness of the treated part is desired.

CHARACTERISTICS:

Due to its outlet pressure, the dissolved dirt is carried away and removed. As it has a low boiling point, it evaporates quickly. The part is clean and dry in a short time. It is non-abrasive and non-corrosive and does not conduct electric current. It can be used safely on plastic materials and non-plastic parts. Care should be taken with plastic parts and resins, which can be damaged due to the solvent power of the product. Test these surfaces before use.

APPLICATIONS:

Especially suitable for degreasing brake discs and clutches. Wet thoroughly and allow to drain.

TECHNICAL DATA:

Description :	Cleaning agent. DME propellant.	
Aspect :	Visual	Colorless liquid
Density at 20° C:	UNE 26-389	0,684 gr/cc

We reserve the right to modify the general characteristics of our products in order to facilitate that our clients benefit from the latest technical advances. For more information about the product, it is recommended to consult the Safety Data Sheet (SDS), available through the Customer Service Center in IADA.

HOW TO USE IT:

Apply the product on the parts to be cleaned, taking care to protect plastics and rubber. Spray on the surfaces until grease, encrustations and residues are completely removed. For brakes and clutches, apply generously, dragging the dirt, leave for a few seconds and the surfaces will be clean and dry. For mechanisms with very thick and dry deposits, use a cloth to remove them.
