

Jodima is an independent Belgian company founded in 1979. Initially oriented towards the import and trade of automotive accessories, the company quickly specialized in the production and packaging of chemical liquids for the automotive aftermarket.

Currently, the company works from its site in Kampenhout (Belgium) of 10,000m² with the most modern robotic installations to blend, fill and palletize various liquids inside and outside the automotive aftermarket.

Today, Jodima is one of the most modern and efficient companies in Western Europe in the field of production of chemical liquids for both cleaning and functional fluids. The company has also diversified into new areas such as construction and agriculture. The production for numerous reputable international brand owners and wholesale distribution companies under Private Label completes the company's development strategy for numerous international customers in Europe.

This means that Jodima is market leader in the automotive segment in the Benelux and wants to expand its activities to other areas within Europe.

In 1957, IADA was founded with the aim of producing an innovative brake fluid to fit out the Pegaso trucks manufactured by ENASA in Barcelona. Since then, the obsession with quality and technological innovation in the development of new products has allowed the company to adapt to the needs of their customers, both national and export. During these years the product range has been expanded, which has grown to include all types of lubricants, coolants, fluids for power steering, fluids for automatic transmissions, additives, greases and a whole series of products for cleaning and maintenance of vehicles. These have been the pillars on which IADA has consolidated its leadership position in the manufacture and commercialization of chemical products for the automotive aftermarket.

The unstoppable process of evolution in which the automotive sector is, makes it vital to develop a decisive policy of innovation, research and development of new products. 10% of IADA's staff works in the R&D laboratory and are exclusively dedicated to constantly innovating and improving the formulas of the products.

Today, IADA is market leader in Spain in his segment of Automotive functional fluids.

The company is located in the Barcelona area to efficiently export products from that location to various countries in Southern Europe, North Africa, Middle East and South America.

With the integration of IADA within Jodima Group, the future as an important player on the European market is assured for both IADA and Jodima.
